

PADMA 28 Capsules

PADMA AG

Tibetan medicinal product

AMZV

What are PADMA 28 capsules and when are they used?

PADMA 28 capsules are a medicinal product manufactured in Switzerland according to a proven formulation of Tibetan medicine (for ingredients see 'What do PADMA 28 capsules contain?'). The product is used in circulatory disorders with symptoms such as a tingling sensation, formication, feeling of heaviness and tension in the legs and arms, numbness of the hands and feet and calf cramps.

According to the tradition of Tibetan medicine, circulation-stimulating, anti-inflammatory effects and antibacterial properties in respiratory-tract infections are attributed to the camphor formulations, on which PADMA 28 capsules are based.

What else should be considered?

Persons who are under medical treatment should inform their physician if they are taking PADMA 28 capsules. If your condition deteriorates, you must consult a physician!

An unbalanced diet or one high in fats, smoking, stress and lack of exercise can lead to exacerbation of the symptoms and should be avoided.

PADMA 28 capsules are also suitable for diabetics. The product does not contain lactose and is gluten-free.

When must PADMA 28 capsules not be used or used only with caution?

PADMA 28 capsules must not be used in patients with known hypersensitivity to one of the ingredients or one of the excipients (see 'What do PADMA 28 capsules contain?').

Inform your physician, your pharmacist or your druggist if you

- are suffering from other diseases
- have any allergies or
- are taking other medication (including medicines you bought yourself!).

There are no studies on the use of PADMA 28 in children and adolescents. Therefore, the use in children and adolescents is not recommended.

May PADMA 28 capsules be taken during pregnancy or breast-feeding?

Based on past experience and if the medication is used according to the instructions no risk is known for the unborn child. However, no systematic scientific studies have been conducted. As a precaution, you should avoid taking any kind of medicines during pregnancy and breast-feeding or ask your physician, your pharmacist or your druggist for advice.

How do you use PADMA 28 capsules?

Adults: Unless otherwise prescribed by the physician 2 capsules are taken 3 times a day with sufficient fluid before or during meals. When there is definite improvement the dosage can be reduced to 1 to 2 capsules per day.

Persons who have difficulty with swallowing should suspend the contents of the capsules in lukewarm water. If gastrointestinal symptoms appear, the capsules may be taken at mealtimes, with ample fluid (preferably lukewarm water). The dosage may have to be reduced. If the capsules have been prescribed by your physician, any adjustment of the dosage should be discussed with him/her. An interval of one-and-a-half to two hours has to be observed between taking PADMA 28 capsules and other medication.

Keep to the dosage indicated in the package insert or prescribed by the physician. If you think that the effect of the medication is too weak or too strong, talk to your physician, your pharmacist or your druggist.

Children: The use and safety of PADMA 28 capsules have not been studied in children and adolescents. Due to its intended use there is no relevant indication in children.

What are the possible side effects of PADMA 28 capsules?

The following side effects can appear after taking PADMA 28 capsules:

Very rarely gastrointestinal disorders and cutaneous reactions or itching may occur. Isolated cases of palpitations and slight restlessness have been observed in predisposed individuals. If you notice any side effects which are not described here, you should inform your doctor, your pharmacist or your druggist.

What else is there to consider?

Like all medicinal products, PADMA 28 capsules must be kept out of reach of children.

The product must only be used up to the date indicated with "EXP" on the container. Store in the original package at room temperature (15 - 25°C).

Further information may be obtained from your doctor, your pharmacist or your druggist who have access to the detailed Product Information for Medical Professionals.
